KRAIBURG TPE's well-rounded TPE solutions for anti-slip mats

KRAIBURG TPE's material solutions meet automotive OEMs' high-performance material and soft-touch surface requirements for automotive interior applications in Asia Pacific and around the world.

An anti-slip mat is an essential interior piece designed to keep objects such as cell phones, eyeglasses, keys, and other personal accessories in place on a car's dashboard or other interior surfaces while driving, thereby preventing the driver from becoming distracted. Anti-slip mats with a soft-touch surface can also function as an attractive feature for the car's interior.

These mats are frequently made of a soft, rubber-like substance, such as thermoplastic elastomers (TPEs), which provide good grip, friction, durability, flame and chemical resistance, and other suitable features.

KRAIBURG TPE, a global manufacturer of thermoplastic elastomer materials and bespoke solutions for a wide range of industries, provides high-quality TPE series of compounds for automotive interior applications.

THERMOLAST® K FG/SF/AP series gains traction in the Asia Pacific market

KRAIBURG TPE's THERMOLAST® K FG/SF/AP series, made for the Asia Pacific market, provides high-performance material benefits to manufacturers that emphasize surface appearance and quality requirement in automobile interior design.

This series of compounds offers high flow properties, easy processing, and soft touch surface. Additionally, these compounds provide good surface mapping for processes that require complex molding designs for aesthetic reasons, and controlled emission and odor levels, making them suitable for anti-slip mat applications.

Other characteristics of the series include good adhesion to PP via the injection molding process, temperature stability up to 100°C, short processing cycle time and low density.

Furthermore, in-process recycling is a possibility for this series of compounds, meeting the automotive market's sustainability standards.

Sustainability successes of our TPEs

Besides anti-slip mats applications, KRAIBURG TPE's recent sustainability innovations include a specially developed material solution for consumer, and industry applications comprising post-consumer recycled (PCR) and post-industrial recycled (PIR) content.

Are you looking for a sustainable TPE solution? [Talk to us!](#)

Our experts are happy to answer any questions you have, as well as to offer the right solution for your application.

KRAIBURG TPE (www.kraiburg-tpe.com) is a global manufacturer of custom thermoplastic elastomers. KRAIBURG TPE was founded in 2001 as an independent business unit of the KRAIBURG Group and is now the industry's competence leader in the field of TPE compounds. The company's goal is to provide safe, reliable and sustainable products for customer applications. With more than 680 employees worldwide and production sites in Germany, the USA and Malaysia, the company offers a large product portfolio for applications in the automotive, industrial and consumer goods industries, as well as for the strictly regulated medical sector. The established THERMOLAST®, COPEC®, HIPEX® and For Tec E® product lines are processed by injection molding or extrusion and offer manufacturers numerous advantages not only in processing but also in product design. KRAIBURG TPE is characterized by its innovative strength, global customer orientation, customized product solutions and reliable service. The company is ISO 50001 certified at its headquarters in Germany and holds ISO 9001 and ISO 14001 certifications at all its sites worldwide.
